

Mark Scheme (Results)

January 2019

Pearson Edexcel International Advanced Subsidiary Level In Chemistry (WCH01) Paper 01 Core Principles in Chemistry

#### **Edexcel and BTEC Qualifications**

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <a href="https://www.edexcel.com">www.edexcel.com</a> or <a href="https://www.edexcel.com">www.btec.co.uk</a>. Alternatively, you can get in touch with us using the details on our contact us page at <a href="https://www.edexcel.com/contactus">www.edexcel.com/contactus</a>.

#### Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <a href="https://www.pearson.com/uk">www.pearson.com/uk</a>

#### **General Marking Guidance**

- All candidates must receive the same treatment.
   Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

#### **Using the Mark Scheme**

Examiners should look for qualities to reward rather than faults to penalise. This does NOT mean giving credit for incorrect or inadequate answers, but it does mean allowing candidates to be rewarded for answers showing correct application of principles and knowledge. Examiners should therefore read carefully and consider every response: even if it is not what is expected it may be worthy of credit.

The mark scheme gives examiners:

- an idea of the types of response expected
- how individual marks are to be awarded
- the total mark for each question
- examples of responses that should NOT receive credit.

/ means that the responses are alternatives and either answer should receive full credit.

( ) means that a phrase/word is not essential for the award of the mark, but helps the examiner to get the sense of the expected answer.

Phrases/words in **bold** indicate that the <u>meaning</u> of the phrase or the actual word is **essential** to the answer.

ecf/TE/cq (error carried forward) means that a wrong answer given in an earlier part of a question is used correctly in answer to a later part of the same question.

Candidates must make their meaning clear to the examiner to gain the mark. Make sure that the answer makes sense. Do not give credit for correct words/phrases which are put together in a meaningless manner. Answers must be in the correct context.

#### **Quality of Written Communication**

Questions which involve the writing of continuous prose will expect candidates to:

- write legibly, with accurate use of spelling, grammar and punctuation in order to make the meaning clear
- select and use a form and style of writing appropriate to purpose and to complex subject matter
- organise information clearly and coherently, using specialist vocabulary when appropriate.

Full marks will be awarded if the candidate has demonstrated the above abilities.

Questions where QWC is likely to be particularly important are indicated (QWC) in the mark scheme, but this does not preclude others.

#### Section A (multiple choice)

Question	Correct Answer	Mark
Number		
1	The only correct answer is B	1
	<b>A</b> is not correct because it is based on $1 \text{ m}^3 = 10^9 \text{ cm}^3$	
	<b>C</b> is not correct because it is based on 1 $m^3 = 10^3$ cm <sup>3</sup>	
	<b>D</b> is not correct because 0.0209 has just been multiplied by 10 <sup>6</sup>	

Question	Correct Answer	Mark
Number		
2	The only correct answer is A	1
	<b>B</b> is not correct because the mass in g has been divided by the atomic number of Na	
	<b>C</b> is not correct because the mass in mg has been divided by the molar mass of Na	
	<b>D</b> is not correct because the mass in mg has been divided by the atomic number of Na	

Question	Correct Answer	Mark
Number		
3	The only correct answer is C	1
	<ul> <li>A is not correct because displacement is a term sometimes used for a redox reaction and this is not redox</li> <li>B is not correct because the reaction produces hydrochloric acid so no neutralisation occurs</li> <li>D is not correct because this reaction is not redox</li> </ul>	

Question	Correct Answer	Mark
Number		
4	The only correct answer is B	1
	<b>A</b> is not correct because it does not take into account that there are four atoms in a molecule of ammonia	
	<b>C</b> is not correct because it uses the formula NH₄ for ammonia and hence five atoms per molecule.	
	<b>D</b> is not correct because molar volume = 24 dm³ has been used	

Question	Correct Answer	Mark
Number		
5	The only correct answer is C	1
	<b>A</b> is not correct because the moles of silver chloride have been halved not doubled	
	<b>B</b> is not correct because the moles of silver chloride have not been doubled	
	<b>D</b> is not correct because the moles of silver chloride have been doubled twice	

Question	Correct Answer	Mark
Number		
6	The only correct answer is C	1
	<b>A</b> is not correct because the mass of silver has not been doubled	
	<b>B</b> is not correct because this is the mass of copper doubled	
	<b>D</b> is not correct because the amount of Ag has been doubled twice	

Question	Correct Answer	Mark
Number <b>7</b>	The only correct answer is C	1
	<b>A</b> is not correct because this is the percentage of phosphorus atoms in the molecule	
	<b>B</b> is not correct because this has been calculated using atomic numbers rather than molar masses	
	<b>D</b> is not correct because this is the percentage by mass of oxygen in the compound	

Question	Correct Answer	Mark
Number		
8	The only correct answer is D	1
	<b>A</b> is not correct because the number of moles of hydrogen formed has been taken as 1 rather than 3	
	<b>B</b> is not correct because the amount of aluminium has been multiplied by 2/3 rather than 3/2	
	<b>C</b> is not correct because a 1:1 reacting ratio has been used	

Question Number	Correct Answer	Mark
9	The only correct answer is D	1
	<b>A</b> is not correct because the volume of CO₂ has not been doubled and the excess oxygen has been omitted	
	<b>B</b> is not correct because the excess oxygen has been omitted	
	<b>C</b> is not correct because the volume of CO₂ has not been doubled	

Question	Correct Answer	Mark
Number		
10	The only correct answer is B	1
	<b>A</b> is not correct because this is the difference between the maximum measured temperature and the starting temperature	
	<b>C</b> is not correct because this is the maximum measured temperature	
	<b>D</b> is not correct because this is the extrapolated temperature at	
	3½ min not the temperature difference	

Question	Correct Answer	Mark
Number		
11	The only correct answer is B	1
	<b>A</b> is not correct because $\Delta H^{\circ}$ has been calculated for the reverse reaction	
	<b>C</b> is not correct because $\Delta H^{\circ}$ has been calculated for the reverse reaction and using only 1 mol of carbon	
	<b>D</b> is not correct because $\Delta H^{\Theta}$ has been calculated using only 1 mol of carbon	

Question Number	Correct Answer	Mark
12	The only correct answer is A	1
	<b>B</b> is not correct because atomisation is always endothermic	
	<b>C</b> is not correct because melting is always endothermic	
	<b>D</b> is not correct because ionisation is always endothermic	

Question Number	Correct Answer	Mark
13	The only correct answer is A	1
	<b>B</b> is not correct because the units of $\Delta H$ are kJ $mol^{-1}$	
	<b>C</b> is not correct because the units of $\Delta H$ are $kJ$ $mol^{-1}$	
	<b>D</b> is not correct because the units of $\Delta H$ are kJ mol <sup>-1</sup>	

Question	Correct Answer	Mark
Number		
14	The only correct answer is D	1
	<b>A</b> is not correct because all three species have the electronic structure $1s^2 2s^2 2p^6$	
	<b>B</b> is not correct because all three species have the electronic structure $1s^2 2s^2 2p^6$	
	${\it C}$ is not correct because all three species have the electronic structure $1s^2 2s^2 2p^6$	

Question	Correct Answer	Mark
Number		
15	The only correct answer is D	1
	<b>A</b> is not correct because alkali metals have the lowest ionisation energy in each period	
	<b>B</b> is not correct because alkaline earth metals never have the highest ionisation energy in a period	
	<b>C</b> is not correct because halogens always have a lower ionisation energy than the noble gas in the same period.	

Question Number	Correct Answer	Mark
<b>16</b>	The only correct answer is B	1
	<b>A</b> is not correct because electrons repel electrons, nuclei repel nuclei and nuclei attract electrons	
	<b>C</b> is not correct because electrons repel electrons	
	<b>D</b> is not correct because nuclei repel nuclei	

Question	Correct Answer	Mark
Number		
17	The only correct answer is C	1
	<b>A</b> is not correct because the longest carbon chain has four	
	carbon atoms so it is a butane	
	<b>B</b> is not correct because the longest carbon chain has four carbon atoms so it is a butane. (Also the numbering of the methyl groups would be incorrect.)	
	<b>D</b> is not correct because there is not an extra carbon atom between the chlorine and the carbon chain	

Question Number	Correct Answer	Mark
18	The only correct answer is C	1
	<b>A</b> is not correct because methane is a greenhouse gas	
	<b>B</b> is not correct because methane is a fossil fuel	
	<b>D</b> is not correct because while true, this is also the case for other fossil fuels	

Question	Correct Answer	Mark
Number		
19	The only correct answer is D	1
	<b>A</b> is not correct because this is the number of carbon-carbon single bonds.	
	<b>B</b> is not correct because this is the number of carbon-carbon bonds.	
	$m{\mathcal{C}}$ is not correct because this omits the carbon-carbon $\sigma$ bond in the double bond	

Question	Correct Answer	Mark
Number		
20	The only correct answer is D	1
	<b>A, B</b> and <b>C</b> are not correct because the double bond is oxidised	
	and therefore the OH groups bond to C2 and C3	

#### Section B

Question Number	Acceptable Answer	Reject	Mark
21(a)(i)	The (gaseous) atom is struck by a <b>high energy</b> electron (removing an electron and forming a positive ion)	molecule	2
	ALLOW Nickel / vapour is bombarded / struck by high energy / high speed electron(s)  (1)		
	IGNORE Just 'electron gun /beam'		
	$Ni + e() \rightarrow Ni^{+} + 2e()$	$Ni \rightarrow Ni^+ + e()$	
	ALLOW Any symbol in place of Ni (1)		
	IGNORE State symbols even if incorrect		

Question Number	Acceptable Answer		Reject	Mark
21(a)(ii)	S: Acceleration and by an electric final ALLOW Focusing / collimating the ion stream and by a series of slits  IGNORE Charged plates Reference to velocity of ions  T: Deflection and by a magnetic field ALLOW magnet / electromagnet  If no other mark is scored acceleration and deflection score OR electric field and magnetic field / magnet / electromagnet score  IGNORE use of incorrect or general	m (1)	Electron /electronic field Electric charge Potential difference	2
	symbols for the ion			

Question Number	Acceptable Answer	Reject	Mark
21(a)(iii)	Neutral atoms / molecules are not affected by electric and magnetic fields OR Only charged particles are affected by electric and magnetic fields		1
	ALLOW So that it can be accelerated / deflected OR So that it is affected by the electric / magnetic field Only ions register on the detector OR A neutral particle would not register on the detector		

Question Number	Acceptable Answer		Reject	Mark
21(b)(i)	MP1 (Expression for $A_r$ ) $\frac{58 \times 100 + 60 \times 39.8}{100 + 39.8} = A_r$	(1)		2
	MP2 (evaluation to 1 dp) $= 58.569 = 58.6$ TE on $\frac{58 \times 60.2 + 60 \times 39.8}{100} = A_{r}$ $= 58.8$	(1)	58.7 81.9	
	Correct answer to 1 dp with no working scores (2) IGNORE Units			

Question Number	Acceptable Answer		Reject	Mark
21(b)(ii)	The mass numbers do not need to be linked to the percentages but if they a used they must be correct			2
	Algebraic method			
	<sup>58</sup> Ni + <sup>60</sup> Ni = 100			
	<sup>60</sup> Ni/ <sup>58</sup> Ni = 39.8/100 = 0.398	(1)		
	<sup>60</sup> Ni = 0.398 x <sup>58</sup> Ni			
	1.398 <sup>58</sup> Ni = 100; <sup>58</sup> Ni = 71.53			
	<sup>58</sup> Ni = 71.53(%) <sup>60</sup> Ni = 28.47(%)	(1)		
	Simple method			
	139.8 is 100% So			
	$39.8 is \frac{39.8 \times 100}{139.8} = 28.47\%$	(1)		
	<sup>58</sup> Ni = 71.53(%) <sup>60</sup> Ni = 28.47(%)	(1)		
	Correct answers with no working scor	res(2)		
	ALLOW Just the correct percentages without identifying the isotopes			
	IGNORE SF except 1 SF			
	Use of $A_r$ (instead of peak heights)			
	$A_r = \left[ \frac{58x + 60(100 - x)}{100} \right]$			
	e.g.  A <sub>r</sub> = 58.5694 gives 71.53 & 28.47 (2)  = 58.569 gives 71.55 & 28.45 (2)  = 58.6 gives 70 & 30 (1)  = 58.8 gives 60 & 40 (1)			

Question Number	Acceptable Answer		Reject	Mark
21(b)(iii)	<sup>58</sup> Ni <sup>2+</sup>	(1)		2
	$(58)Ni^+ + e(^-) \rightarrow (58)Ni^{2+} + 2e(^-)$			
	ALLOW			
	$^{(58)}$ Ni <sup>+</sup> $\rightarrow ^{(58)}$ Ni <sup>2+</sup> + e( <sup>-</sup> )			
	OR $^{(58)}\text{Ni} \rightarrow ^{(58)}\text{Ni}^{2+} + 2e(^{-})$			
	OR $(58)Ni^{+} - e(^{-}) \rightarrow (58)Ni^{2+}$			
	OR			
	$(58)$ Ni - 2e( $^{-}$ ) $\rightarrow (58)$ Ni <sup>2+</sup>	(1)		
	Any of these equations <b>including</b> th	e		
	mass number on the RHS scores (2)			
	IGNORE state symbols even if incorr	ect		

Question Number	Acceptable Answer	Reject	Mark
21(c)	In sport to detect the (illegal) use of drugs  To measure blood alcohol levels	measurement of isotope concentrations radio isotope dating	1
	In the pharmaceutical industry to EITHER establish whether a desired compound has been formed OR Test the purity of a sample	pharmacists	
	ALLOW Any valid application of the identification of chemical compounds  IGNORE Just 'to identify chemical compounds' Generalisations e.g. 'space research' Drug testing		

(Total for Question 21 = 12 marks)

Question Number	Acceptable Answer	Reject	Mark
22(a)	This is (the enthalpy / heat / energy change / produced / released) when 1 mol of a substance is burned / combusted	Required	2
	ALLOW 'compound / reactant / element' for 'substance' (1)	atom	
	completely / in <b>excess</b> oxygen <b>and</b> under standard conditions OR 1 atm / 1.0 x 10 <sup>5</sup> Pa and a stated temperature / 298 K / 25°C		
	ALLOW 'air' for 'oxygen'  IGNORE r.t.p / s.t.p.		

Question Number	Acceptable Answer	Reject	Mark
22(b)(i)	$\Delta E = 250 \times 4.18 \times 9.5$ = 9927.5 (J) / 9.9275 <b>kJ</b>	J mol <sup>-1</sup> / kJ mol <sup>-1</sup>	1
	ALLOW $\Delta E = 250 \times 4.2 \times 9.5$ = 9975 (J) / 9.975 <b>kJ</b>		
	IGNORE SF except 1 SF IGNORE signs		

Question Number	Acceptable Answer	Reject	Mark
	Acceptable Answer  ALLOW Any value for $\Delta E$ Molar mass of ethanol = 46 (1) Amount of ethanol = 0.55/46 = 0.011957 mol  (1) Enthalpy of combustion = $-\frac{9927.5}{0.011957}$ = $-830300 \text{ J mol}^{-1}$ / $-830.3 \text{ kJ mol}^{-1}$ (1) IGNORE SF except 1 SF  Correct answer including sign & units without working scores (3)  (+)830300 / (+)830.3 scores (2)	Reject	Mark 3
	COMMENT  Do not penalise premature correct rounding (e.g. 0.012 for 0.011957 which gives –827 kJ mol <sup>-1</sup> )  Here and throughout the paper allow kJ mol <sup>-</sup> for kJ mol <sup>-1</sup>		

Question Number	Acceptable Answer	Reject	Mark
22(c)(i)	Percentage error = $\frac{100 \times (1367 - 840)}{1367}$		1
	= 38.552 (%) IGNORE SF except 1 SF		

Question Number	Acceptable Answer	Reject	Mark
*22(c)(ii)	Uncertainties in measurement result in random variations above and below the expected value ALLOW Just 'uncertainties are random' (1)  (Almost) all the values obtained by the students must have been below the Data Book value indicating a systematic error ALLOW Just 'the error is systematic' (1)  If no other mark is scored 'Uncertainties are too small to account for the difference' scores (1)		2

Question Number	Acceptable Answer		Reject	Mark
*22(c)(iii)	Any of these pairs			2
	Heat loss (to the surroundings) (fron any part of the apparatus)	n (1)		
	This energy does not heat up the wa	ater (1)		
	OR Incomplete combustion (of ethanol)	(1)		
	The ethanol produces less energy	(1)		
	OR Evaporation of ethanol	(1)		
	The ethanol (apparently) produces le energy (per g)	ess (1)		
	OR The calculation does not take into account heating of the container / apparatus	(1)		
		ater (1)		
	IGNORE So the measured energy / temperate change is too low	ure		
	Explanations of cause, eg, 'no insulation', 'lack of stirring'			

Question Number	Acceptable Answer	Reject	Mark
22(d)(i)	$\Delta H_c^{\theta}$ $C_3H_8O(I) + 4\frac{1}{2}O_2(g) \longrightarrow 3CO_2(g) + 4H_2O(I)$ $\Delta H_f^{\theta}(C_3H_8O(I)) \qquad [3x\Delta H_c^{\theta}(C(s))] \qquad 4x\Delta H_c^{\theta}(H_2(g))$ $3C(s, graphite)) + 4H_2(g) + 5O_2(g)$ All three substances in box $ALLOW$ $C(s) \qquad (1)$ All three states <b>and</b> coefficients in box (1)		3
	Enthalpy changes with arrows (species & states <b>not</b> required but if given must be correct)  ALLOW $\Delta H_{f^{o}} (H_{2}O(I)) \text{ for } \Delta H_{c^{o}}(H_{2}(g)) \tag{1}$ IGNORE $\Delta H^{e} \text{ coefficients even if incorrect}$ omission of second arrow on RHS	Omission of standard symbol	

Question Number	Acceptable Answer		Reject	Mark
22(d)(ii)	$\Delta H_{c}^{\theta}(C_{3}H_{8}O(I))$ $= 3x\Delta H_{c}^{\theta}(C(s)) + 4x\Delta H_{c}^{\theta}(H_{2}(g)) - \Delta H_{c}^{\circ}(C_{3}H_{8}O(I))$	<b>(</b> (		2
	= 3x-394 + 4x-286 -(-2021)	(1)		
	$= -305 \text{ (kJ mol}^{-1}\text{)}$	(1)	Incorrect	
	(+)305 scores (1)		Incorrect units	
	Omission of coefficient (3x and 4x) gives (+)1341 scores (1)			
	IGNORE SF except 1 SF			
	Correct answer with no working scores (2)			
	COMMENT Omission of any one term from the calculate scores (0)	tion		

(Total for Question 22 = 16 marks)

Question Number	Acceptable Answer	Reject	Mark
23(a)(i)	1s <sup>2</sup> 2s <sup>2</sup> 2p <sup>6</sup> 3s <sup>2</sup> 3p <sup>5</sup> OR 1s <sup>2</sup> 2s <sup>2</sup> 2p <sub>x</sub> <sup>2</sup> 2p <sub>y</sub> <sup>2</sup> 2p <sub>z</sub> <sup>2</sup> 3p <sub>x</sub> <sup>2</sup> 3p <sub>y</sub> <sup>2</sup> 3p <sub>z</sub> <sup>1</sup> ALLOW 1s2 2s2 2p6 3s2 3p5	[Ne] 3s <sup>2</sup> 3p <sup>5</sup>	1

Question Number	Acceptable Answer	Reject	Mark
23(a)(ii)	ALLOW Any symbols for electrons Bond pair side by side Omission of circles Inclusion of a horizontal line for the bond Non-bonding electrons unpaired  IGNORE Inner shell electrons even if incorrect		1

Question Number	Acceptable Answer	Reject	Mark
_	Any three from four:  MP1  The (half-filled) 1s orbital of hydrogen  (1)  MP2  and a (half-filled) 3p orbital of chlorine  (1)  In MP1 and MP2 penalise the omission of principal quantum number (1/3) once only Penalise the use of subshell for orbital once only  MP3  overlap of the orbitals along the axis between the atoms  ALLOW	Reject	Mark 3
	Head-on overlap OR Bond formed is a σ bond OR A diagram e.g.  H  ALLOW Diagram with one 3p lobe (1)  MP4 Producing a region of high electron density (between the two nuclei) (1)		

Question Number	Acceptable Answer	Reject	Mark
23(b)(i)	ALLOW Any symbols for electrons Na† with no electrons Brackets omitted Any relative size for ions  IGNORE Inner shell electrons even if incorrect		1

Question Number	Correct Answer	Reject	Mark
*23(b)(ii)	Sodium chloride is (almost) 100% ionic (1)  Silver chloride is partly / significantly covalent (1)  EXPLANATION 1  silver ion / Ag <sup>+</sup> is polarising  ALLOW  has a high(er) charge density  OR  chloride ion / Cl <sup>-</sup> is polarised / distorted (by Ag <sup>+</sup> )  IGNORE  Just 'polarisation occurs'	silver / Ag polarising silver ion has a high(er) charge Ag <sup>2+</sup> / Ag <sup>3+</sup> Chlorine / Cl polarised	3
	there is orbital overlap between silver and chloride ions  EXPLANATION 2  large electronegativity difference between Na and Cl  and  small(er) electronegativity difference between Ag and Cl  ALLOW  Reverse arguments  IGNORE  Reference to radius of Ag <sup>+</sup>	Reference to electronegativit y differences between <b>ions</b>	

(Total for Question 23 = 9 marks)

Question Number	Acceptable Answer		Reject	Mark
24(a)	A is fractional distillation or fractionation  IGNORE Just 'distillation'	(1)		4
	<b>B</b> is cracking OR catalytic cracking OR thermal cracking	(1)		
	C is reforming OR reformation OR catalytic reforming OR catalytic reformation	(1)	forming / formation/ deforming / dehydrogenation/ elimination	
	<b>D</b> is polymerisation OR addition polymerisation OR Polymerising	(1)		

Question Number	Acceptable Answer	Reject	Mark
24(b)	The compounds evaporate / boil and condense OR evaporation / boiling and condensation  ALLOW Liquefy for condensation (1)  The separation/process depends on (differences in) boiling temperature / boiling point / boiling temperature range OR  All the compounds in the naphtha fraction boil at similar temperatures / over a narrow range of temperature (1)	melting temperature / melting point density	2

Question Number	Acceptable Answer		Reject	Mark
-	Acceptable Answer $C_{10}H_{22} \rightarrow C_8H_{18} + C_2H_4$ OR Displayed / skeletal / structural formulae any combination  LHS  RHS  Correct equations with an alkane reactar with more than 10 carbons but forming octane <b>and</b> more than one molecule of ethene score (1)  e.g. $C_{12}H_{26} \rightarrow C_8H_{18} + 2C_2H_4$ Balanced correct equations with an alkar reactant with more than 10 carbons <b>and</b> product other than octane score (0)	(1) (1) nt	Reject	Mark 2
	e.g. $C_{12}H_{26} \rightarrow C_{10}H_{22} + C_{2}H_{4}$ IGNORE State symbols even if incorrect			

Question Number	Acceptable Answer	Reject	Mark
24(d)(i)	$C_8H_{18} \rightarrow C_8H_{16} + H_2$ OR Displayed / skeletal / structural formulae or any combination  IGNORE State symbols even if incorrect		1

Question Number	Acceptable Answer	Reject	Mark
24(d)(ii)	(because) it has a high(er) octane rating / number (than octane) OR to increase the octane rating / number (of petrol) ALLOW RON (Research Octane Number) for octane number (1)  (this gives) smoother / more efficient combustion (of the petrol) OR reduces engine knocking OR prevents pre-ignition (1)  IGNORE So petrol burns more easily / faster		2
	prevents auto-ignition Any reference to energy produced		

Question Number	Acceptable Answer	Reject	Mark
24(e)	H  n  C  C  H  H  H  Repeat unit of poly(ethene), ie, brackets and n omitted  (1)	Repeat unit with C>2	2
	Everything else (1)	suffix 'n' on LHS of equation	

(Total for Question 24 = 13 marks)

Question Number	Acceptable Answer	Reject	Mark
25(a)(i)	Ultraviolet / UV radiation  ALLOW  Ultraviolet / UV light  Ultraviolet / UV rays  Ultraviolet / UV  Sunlight  light	sun	1

Question Number	Acceptable Answer	Reject	Mark
25(a)(ii)	a single / one / an electron (1)		2
	IGNORE unpaired electron		
	transferring / moving from the bond to one of the (chlorine) atoms joined by the bond	to each chlorine atom	
	ALLOW transferring / moving from a bond to an atom (1)		
	IGNORE Reference to / description of homolytic / heterolytic bond fission		

Question Number	Acceptable Answer	Reject	Mark
25(a)(iii)	$CH_4 + Cl \rightarrow CH_3 + HCl$ (1)		2
	$CH_3$ + $Cl_2 \rightarrow CH_3CI + CI$ (1)		
	ALLOW		
	Equations in either order		
	Penalise omission of the unpaired electron or extra unpaired electron once only		
	Penalise use of Br once only		

Question Number	Acceptable Answer	Reject	Mark
25(a)(iv)	MP1 In propagation one (chlorine) radical produces one molecule of chloromethane and a new radical in each sequence		3
	ALLOW In propagation free radical(s) are regenerated (1)		
	MP2 So the propagation stage keeps repeating (until radicals are removed in the termination stage) (1)		
	IGNORE Just 'chain reaction occurs'		
	MP3 In termination two radicals / a methyl radical and a chlorine radical form one molecule of chloromethane and no other product		
	ALLOW In termination two radicals form one product (1)		
	If no other mark is scored, 'the termination forming chloromethane is one of three possible terminations' scores (1)		
	IGNORE Just 'termination removes free radicals' Reference to other terminations Equations		

Question Number	Acceptable Answer	Reject	Mark
25(b)(i)	Electrophilic addition (reaction) OR Heterolytic electrophilic addition ALLOW Electrophile addition		1

25(b)(ii) any bromoalcohol  H Br Br	
H Br Br	1
H—C—C—C—H  H H H  ALLOW  Any correct formula that clearly shows the Br atoms on C1 and C2  IGNORE  Names even if incorrect  Reaction equations Mechanisms	

(Total for Question 25 = 10 marks)

TOTAL FOR SECTION B = 60 MARKS TOTAL FOR PAPER = 80 MARKS

Pearson Education Limited. Registered company number 872828 with its registered office at 80 Strand, London, WC2R 0RL, United Kingdom
